Activities

Management Improvements

A Specification and implementation of processes and activities

B Specification of processes of regular activities (monitoring)

C Specification of the embedding process

A1— Mind evaluation, data quality and assurance practices in the entire process

A2— Decide on AAs, respective triggers, data triangulation and data analysis procedures and derive information and management requirements together with stakeholders

A3— Develop context aware procedures for gathering defined key information together with stakeholders

A4— Decide on and develop specific data and personnel management procedures (together with stakeholders)

A5— Develop guidelines in case of trigger but lack in response for adequate response

A6— Develop mechanism for pre-defined prioritisation of regions in case of insufficient resources

A7— Develop training materials for the training of trainers and participants

A8— Implement the developed awareness, education and sensitisation foundation together with the training of participants

A9— Implement mapping and gathering of key features of water sources

A10— Implement regular monitoring practices

B1— Integrate regular supervision intervals and embed a feedback mechanism

B2— Conduct regular refresher trainings

B3— Evaluate on a regular basis and iteratively improve the project

B4— Constantly recruit new participants and maintain the community and the motivation

C1— Integrate CBWM foundation on community level

C2— Integrate monitored data, AAs and trigger into the EAP and prevailing DDR decision-making practices and procedures on a regional and national level including follow up measures and summarize those in a ratified protocol

C3— Integrate other national and international stakeholders in the response activities
