

Goals

Products

Activities

Method Improvements

A A suitable method for determining primary information and critical characteristics of the water source

B A suitable method to determine and measure water source thresholds

C A suitable categorization of water source thresholds for triggering AAs

D A suitable method to transmit, store and analyse initial, rare and regular monitored information

A1 – Identify necessary primary information and key features

A2 – Evaluate methods to acquire those information

B1 – Identify local and technical conditions and limitations

B2 – Evaluate 'scientific' measurement methods and local practices

C1 – Determine AAs to know when and what information is required to have adequate lead-time

D1 – Evaluate different methods for transmission, storage, etc. in terms of usability, timeliness, requirements and fruitfulness
