Activities

Awareness Raising & Public Education

A The community and the individual members have good and up to date background information

B The community and the individual members are sensitized about the initial and regular monitoring routines

C The mapped and monitored information, as well as climate and weather forecasts, are made available to the community

D The community and the individual members know how to address water related issues within their scope of action

E Measures are in place to account for the heterogeneity of the community

A1— Gather information and create teaching material by merging scientific and local knowledge on an equal footing

A2— Conduct information workshops to inform communities about their water resources and related risks

B1— Explain the project in detail (possibly together with the background information workshop)

B2— Involve the community elders from the beginning to inform and sensitise the community

C1— Regularly inform participants about the prevailing climate and weather forecasts

C2— Setup of an early warning information flow to inform the community in a timely manner

D1— Identify and compile respective relevant information

D2— Train local volunteers and facilitate subsequent transfer to the community
